

# We believe

1. We believe in the **power of goodness**.
2. We believe that **transforming healthcare** in the US is the biggest thing we can do to help **make peoples' lives better**.
3. We believe that most Americans are **less divided** about what we want from healthcare than politics would lead us to believe—**we want quality, affordable healthcare** for our families.
4. We believe that most people working in healthcare came to the industry because they **want to make a difference**.
5. We believe that **radical collaboration** creates new meaning.
6. We believe that making the current model more efficient is not enough; we need **to innovate, and to fundamentally rethink** how we deliver and finance care.
7. We believe that truly effective healthcare is **simple, supportive, and appealing**.
8. We believe that **health equity** is essential, and that the system is only right when high-quality care is accessible to all.
9. We believe that healthcare **needs to address the whole person** and their social context.
10. We believe that **healthcare is fixable**.
